(a) Graded confidence intervals
Mean interval length (log scale)
10^{-2}
10^{-4}
10^{-6}
10^{-8}
10^{-10}
10^{-12}
10^{3}
10^{4}
10^{5}
10^{6}
Sample size n (log scale)
(b) Approach to predicted exponents
Adjacent log-length / log-n slope
−0.50
−0.75
−1.00
−1.25
−1.50
−1.75
−2.00
−2.25
10^{3}
10^{4}
10^{5}
Geometric midpoint of adjacent n (log)
q=1, p=16
q=2, p=16
q=3, p=8
q=3, p=16
q=3, p=64 (singular)
q=4, p=16
